# Easter Eggs

*To wish good luck*

*As a memory of important events*

*Delivering a unique gift*

*To reward an achievement*

*To bring up a smile*

*To amaze and surprise*

*To add that special touch*

*For new beginnings*

*For whatever you feel...*

## EASTER EGGS

special collection, designed and created in Verona, Italy.

These decorative eggs are 3D printed with resin then hardened (polymerized) with UV light. The object is made with resin layerings hit by light and hardened in a clear tank filled with liquid. A complex and fascinating process that allows one to create detailed and peculiar objects.

At last free from the restricting rules of traditional print, these objects come to life as unique and chic, reminiscent of ancient emotional shapes and geometries, driven by creativity and endless yearning to dig into nature and art shapes.

## ARTISAN PRODUCTIONS

Limited numbers and quality: small runs using different colours of resin, made with different temperature and humidity in the environment. This allows different shades of colour and top finish: this is the distinctive characteristic of 3DshapeDesign as every piece is unique. Prints may vary. Remember this is a hand refined object.

## TECHNICAL INFO

To make these objects, two printing techniques are used that allow these plays of light and transparency. The precision of UV light resin printing for eggs and one-wire shell construction with traditional printers.

## HOW TO BUILD

1 Design on paper of the object and creation of the three-dimensional model.

2 Adding supports to the 3D model and slicing. Printing the object (from 6 to 20 hours time) and removing supports.

3 Different phases of cleaning with ISOPROPILICO ALCOOL ethanol, then water spin-dried or with ultrasound.

4 Dry finish with water jet and soft brushing. Final curing with UV 405mm lamp and finishing touch with layered shiny or matte varnish and final drying.
